SUMMARY

BCA student building a practical foundation in Python scripting, networking fundamentals, and security operations. Hands-on learning includes Linux systems, Wazuh alert review, Windows security-log analysis, and rule-based log parsing. Seeking an entry-level Backend Developer, Full Stack Developer, QA/Software Tester, or technical support role at Paras Technologies.

EDUCATION

Bachelor of Computer Applications (BCA) - Sri Sai University, Palampur, Himachal Pradesh | 2024-2027 | CGPA: 7.11

Diploma in Modern Computer Applications (DMCA) - CDAC | Grade: A

TECHNICAL SKILLS

- Programming & Web: Python (basic scripting), HTML, CSS, Git/GitHub
- Backend & Data: Python file handling, log parsing, basic database and REST API concepts
- QA & Problem Solving: Debugging, structured reporting, test-case and defect-reporting fundamentals
- Systems & Networking: Linux/Unix, Kali Linux, Ubuntu Server, TCP/IP, DNS, ports, protocols, SSH, Nmap
- Security Tools: Wazuh, Windows security logs, alert review, basic incident-investigation workflow

PROJECTS

Python Log Analyzer & Network Anomaly Detector

Python | Rule-based detection | Log parsing | Completed analyzer; anomaly extension in development

- Implemented rule-based parsing to identify repeated failed-login events and suspicious IP activity in system logs.
- Generates structured findings for review; planned extension will flag unusual connection and authentication patterns in syslog or exported network data.
- Validation methodology and detection results for the anomaly extension are still in progress.

E-Commerce / Inventory Backend

Planned / In Development | Django ORM or FastAPI + SQLAlchemy | REST API | Relational data modeling

- Design target: product catalog, cart, and order-flow modules with separate Product, Cart, and Order data models.
- Planned learning scope: RESTful CRUD endpoints, request validation, authentication concepts, and ORM-based persistence.
- The project is not yet implemented; no payment gateway, stock-concurrency, or production features are claimed.

Cybersecurity Home Lab

Wazuh | Kali Linux | Ubuntu Server | Windows | Authorized security practice

- Built a personal multi-system practice environment with Wazuh, Kali Linux, Ubuntu Server, and Windows for authorized security learning.
- Reviewed Wazuh alerts and Windows security logs to connect security events with an event triage, alert review, and basic incident-investigation workflow.
- Used the lab to strengthen familiarity with Linux administration, authentication activity, and security-monitoring concepts.

Personal Portfolio Website

HTML, CSS | Responsive personal portfolio | AI-assisted development

- Designed and published a responsive personal website to present projects, technical learning, and professional contact links.
- Structured the site around clear project summaries and an accessible online profile for recruiters and collaborators.
- Used an AI-assisted development workflow to improve the page while retaining ownership of the content and presentation.

CERTIFICATIONS

- Cisco Introduction to Cybersecurity - Completed
- Cisco Networking Academy: Networking Fundamentals - In Progress
- Google Cybersecurity Certificate (Coursera) - In Progress

ADDITIONAL INFORMATION

- Hardworking and self-directed learner with a consistent focus on building technical skills.
- Detail-oriented when reviewing logs, investigating alerts, and documenting findings.
- Adaptable team member who is open to learning new tools, frameworks, and development workflows.
- Typing: 80 WPM with 99% accuracy | Languages: Hindi (Native), English (Conversational)
